Many midsize organizations can't justify the development and deployment costs of a custom SAP implementation. Nor the risk of hidden or add-on costs.

With LSI • ROI, our consultants readily integrate pre-proven solutions and industry best practices into a comprehensive ERP system. Eliminating 25% to 40% of the typical cost of an ERP implementation.

While providing the optimized efficiency and visibility generally associated with ground-up implementations.

Built to perform.

Mission-ready LSI • ROI solutions are delivered within predictable timeframes. The end result is a fully integrated system supporting the gamut of public-sector core business processes. From financials and purchasing. To management of human resources and constituent/student relationships. To business analytics and automated GASB 34/35 reporting capabilities.

Ready to adapt.

Based on the SAP ERP 6.0 platform, LSI • ROI provides full visibility of system operations, parameters and metrics. Ongoing enhancements are assimilated with no disruption to daily operations. Third-party applications are easily integrated. While changing regulatory compliance requirements are addressed through advanced documentation and reporting support.

Easy to adopt.

Ensuring a quick and seamless transition for your staff, LSI • ROI is designed for maximum productivity. Role-based navigation presents users only with the information, reports and worklists that are relevant to their functions. Simplified interfaces offer real-time contextual help. Enhanced reporting and printing capabilities feature the latest technology from SAP and Adobe.
