# SAP Student Lifecycle Management

SAP Student Information System – Putting the student at the heart of your institution

SAP SE (NYSE: SAP) and invenioLSI (an SAP Gold Partner dedicated to Higher Education) have partnered to provide next-generation Student Lifecycle Management solutions to the North American Higher Education market.

The SAP® Student Lifecycle Management (SLcM) is a flexible, mature, and comprehensive Student Information System application which helps higher education and research institutions build a student-centric culture that is more responsive to students' needs by adding self-service processes, mobile access and embedded analytics for data-informed decisions.

The integrated solution enables you to digitally transform the student lifecycle by better understanding potential and current student needs and maximizing strategic planning efforts. It also helps you streamline the management of student services, from recruitment through graduation and beyond, to build a community of lifelong learners.

SAP Student Lifecycle Management can be implemented in a cloud-based environment as a fully-functioning platform or in stages based on your organization's landscape. As part of an Intelligent Enterprise, Student Lifecycle Management brings together a variety of SAP solutions and technologies including SAP Student Activity Hub, SAP Customer Experience and Management Solutions (Qualtrics), SAP Travel & Expense (Concur), new digital technologies like blockchain, AI and machine learning, and chatbots through SAP Cloud Platform. The power of the solution is its flexibility and extensibility with protected configurations during solution upgrades. Built on HANA, SAP's in-memory platform, Student Lifecycle Management is capable of robust and fast reporting, and intuitive user experience.

Increase Competitive Advantage through supporting student services and administration

Enhancing the Recruiting Process

With SAP Higher Education Solutions, admissions officers can use prospect data gathered during the recruitment process to communicate with prospective students via targeted recruitment campaigns. Enrollment Directors can then use the powerful analytics functionality to review the effectiveness of these campaigns whilst useful features such as a graphical dashboard display helps forecast response rates.

Streamline the Admission Process

Prospective Students (international, transfer, or first- time) can utilize the robust online admissions process and indicate whether they plan to apply for financial aid, track the status of their applications, or make payments via credit card, or electronic billing and payment services, once accepted.

Enable Transparent Enrollment and Registration with the Central Student Record

Following acceptance, students can register for courses via a user-friendly app, access a self-service portal which includes full visibility into their personal student file, edit their personal records (with certain restrictions), review class schedules and the status of their student accounts, store ID photographs, and receive other self-service access as determined by the institution. All of these services can be accessed using a mobile device – the preferred choice for most students.

Simplifying Academic Advising

With the academic advisor app, advisors can help students select courses, plan for upcoming terms, and complete their coursework successfully and on time.

Degree audit functionality helps advisors establish course lists that meet students' degree requirements.

Managing Student Financials

SAP Student Lifecycle Management calculates tuition and fees as well as financial aid using SAP HANA platform integration services into a third-party financial aid software, to help ensure that students only have to pay the net amount due. The software also enables tuition and university fees paid by third parties to be posted to students' accounts and costs to be tracked by sponsor. Students can check the status of their accounts online and pay for open items using a payment card or other payment method.

Monitor Examination, Grading and Academic Progression

Authorized faculty members can enter results based on grading scales that vary according to course levels, and they can track course attendance as well as update degree progression and the degree audit processes. The software can be used to monitor and measure student progress based on grade point averages and credits for undergraduate and graduate work. The web-based self-service functionality lets students request that official copies of their transcripts be sent directly to them or to third parties, such as potential employers.

## Access Services for Change of Program and Degree Audits

The system automatically routes program changes through an internal approval process. Students, faculty, and staff have access to web-based degree audit functionality. Students can monitor their status, while faculty and administrative staff can simulate degree audits as they advise students or as part of the examination and graduation processes.

Support Processes for Graduation and Alumni Relations

Track applications for graduation and evaluate results of degree audits to support the graduation process. Students can access self-service graduation request forms and applications.

Streamlining Operations by enabling academic and administrative processes

Integrate your Academic Lifecycle Processes

The application helps you manage the complete academic lifecycle by integrating student administration, academic activity, and financial transactions into a seamless process. With integration, admissions officers and authorized users get role-based access to student master records.

Gain Insights with Self-Serve Analytics

Perform complex analyses and queries with SAP in-memory computing and SAP Analytics Cloud.

Technologies built into the solution analyze student business, and student data, so you can better understand and dynamically address the needs of students, faculty, and alumni. In particular, our tools help you manage the student population and improve performance and retention.

Integrate your Business Processes and Workflows

The application enables you to automate administrative tasks, generate correspondence, and manage authorization, security, and reporting processes with preconfigured workflows and templates with rule checking and logic built into the solution.

Provide Secure Data and Access to the Authorized Users

Authorization functionality helps secure data and control access to protect against threats to critical processes and information, from both internal and external sources. Data is secured at the transactional, process, and activity levels.
